The tool comes with a great amount of documentation that teaches you how to use each function of the app. Woah, that is a cool introduction. I downloaded this awhile ago. It is very similar to u-he, except there is no tabler. It has a templary sound bank (yes, you got me, I am a Mac and heard of ReCycle but never really used it) that I can save in the Windows Templates folder. So I made a save version with the songs I liked and converted them to.wav. I used to have these and it was good, but with my new music making software there is just no reason for these songs to exist. If you were to use it on windows and on mac, I'd get rid of it. This is an old app, and probably was never ported to windows. It's easy to make a tool for all your favorite songs. Just start up the app you normally use, and just rip off some of the cool stuff. Then go to ArkosTracker.com, get the song, and make a WAV file. This is an old app, and probably was never ported to windows. It's easy to make a tool for all your favorite songs.
